

Co-location Facility

iseek Communications operates a state-of-the-art co-location facility in the Brisbane CBD. iseek's co-location facility provides an optimal physical environment for companies needing to locate their computer equipment with access to high capacity Internet bandwidth.

iseek provides co-location services to a number of local, national and international customers. The main features of the iseek co-location facility include:

Data Services

iseek Communications is a premium aggregator of data traffic for OPTUS. As an aggregator, iseek Communications' co-location facility utilises the OPTUS backbone (2x155Mbps ATM links), which provides all OPTUS data services. This includes Ethernet, DSL, Frame Relay and ATM.

Security

iseek Communications provide 24-hour monitored security and 24-hour emergency access to the facility. An installed web cam allows customers to remotely view their equipment via a web browser.

Fault Tolerance

The co-location facility has various systems in place for handling situations such as a power outage or failure, including UPS's, back up diesel generators and re-routing traffic capabilities.

Industrial Climate Control System

The co-location facility uses state-of-the-art technology for climate control. The facility is fitted with automated temperature and humidity sensors, as well as a high temperature alarm. All this is in place to provide the optimum server environment.

Gas Fire Suppression System

In the event of a fire occurring within the co-location facility, a highly effective INERGEN gas fire suppression system is activated to suffocate any flames.

Raised Flooring

iseek Communications' co-location facility features a tiled, raised steel and concrete access floor. This flooring provides an electrical grounding that helps to maintain a static free environment, as well as assisting airflow to the servers.

"Planet Mirror selected iseek to provide co-location for its servers based on their demonstrated abilities to meet our business requirements, including a high level of reliability of the data centre and facilities. iseek were also very customer focused in working with us to achieve our goals."
